*You create the "dots"...*  
**SmartMark connects them!**

SmartMark is a target acquisition option for Allen cutters. It automatically scans printed registration marks and launches the contour cut process. It can scan up to 3 registration marks and accurately adjust for scale and skew. Just place the SmartMark sensor near the first registration mark and the system will automatically acquire the target(s) and commence contour cutting. SmartMark supports step-and-repeat productivity, automatically.
